

EHV Network of the Netherlands

National transmission grid and interconnectors

Numbers indicate the nominal component capacity in MVA or MW for compensation.

Values in brackets depict the physical design capacity of an assets which is confined to a lower operational capacity due to another limiting component or limiting factor elsewhere in the grid.

* Values with an asterisk are unconfirmed or the data sources are inconsistent (different values).

Relevant notes for this release

- (1) Temporary / ad-hoc overhead line.
- (2) Provisional.
- (3) 380 kV installation bypassed due to major issues concerning the GIS switchgear. Actual status and availability may vary.
- (4) Temporary no second 220/110 kV transformer due to a calamity during exchange of the physical machine.
